

COMP 324 Network Security

Module 3 Lab 1: Linux User & Group Management

Lab Report

Student: Erik Gonzalez

Professor: Samuel Addington

Date: September 28, 2025

Exact Commands Run

```
# Step 0: Verify sudo
sudo -v
```

```
# Step 1: Add new user student1
sudo useradd -m -s /bin/bash student1
sudo passwd student1
id student1
getent passwd student1
```

```
# Step 2: Create group developers
sudo groupadd developers
getent group developers
```

```
# Step 3: Add student1 to developers
sudo usermod -a -G developers student1
id student1
su - student1
groups
exit
```

Step 0: Verify Sudo Access

```
guerobarbas ~$ sudo -v
[sudo] password for guerobarbas:
guerobarbas ~$
```

Step 1: Add New User student1

```
guero@barbas: ~$ sudo -v
[sudo] password for guero@barbas:
guero@barbas: ~$ sudo useradd -m -s /bin/bash student1
guero@barbas: ~$ sudo passwd student1
New password:
Retype new password:
passwd: password updated successfully

guero@barbas: ~$ id student1
uid=1001(student1) gid=1003(student1) groups=1003(student1)

guero@barbas: ~$ getent passwd student1
student1:x:1001:1003::/home/student1:/bin/bash

guero@barbas: ~$
```

Step 2: Create Group developers

```
guero@barbas: ~$ sudo groupadd developers
guero@barbas: ~$ getent group developers
developers:x:1004:

guero@barbas: ~$
```

Step 3: Add student1 to developers

```
guero@barbas: ~$ sudo usermod -a -G developers student1
guero@barbas: ~$ id student1
uid=1001(student1) gid=1003(student1) groups=1003(student1),1004(developers)

guero@barbas: ~$ su - student1
Password:
[student1@threepio ~]$ groups
student1 developers
[student1@threepio ~]$ exit
logout

guero@barbas: ~$
```

Reflection

I found it surprising how Linux separates users into different groups, each with its own permissions, and how this affects what commands and actions a user can perform.
